Technical Program Manager | Infrastructure & Systems Integration

SUMMARY

Certified PMP and CSM Technical Program Manager with 4 years directing enterprise **infrastructure** and systems integration programs, from data pipeline architecture and platform migrations to full-scale cross-division rollouts. Skilled at governing risk, change control, and sprint delivery for complex technical environments, and at translating deep infrastructure detail into clear executive decisions. Known for stepping into ambiguous, high-stakes technical programs and driving them to on-time, on-budget delivery with measurable business impact.

EXPERIENCE

Baptist World Alliance

Apr 2026 – Present

Technical Program Manager — Enterprise Infrastructure & Systems Integration

Virginia, United States

- Directed the end-to-end delivery of an **AWS-hosted enterprise data and systems integration** platform powering **AI-driven predictive modeling pipelines**, cutting project delivery blockers by 14% by designing and operating an automated risk-tracking system across a 6-engineer cross-functional infrastructure team.
- Increased **AWS infrastructure deployment velocity by 16% by engineering automated regression testing**, while building **real-time dashboards** that gave executive leadership live visibility into pipeline health and delivery metrics.
- Protected the **platform's architectural integrity** across every release cycle by owning the change-control board (CCB) process for all infrastructure-impacting requests, fully preventing unauthorized scope creep.
- Unified 4 corporate divisions around a single **infrastructure roadmap** with zero unplanned scope escalations, by translating complex systems architecture and integration dependencies into milestone-level reporting for executive leadership.

COM4 Global

Apr 2023 – Oct 2025

Technical Project Manager — Systems Integration

Virginia, United States

- Led an **AWS-based enterprise infrastructure and systems integration** program migrating legacy technical systems **across 8 business divisions onto a unified cloud integration platform**, hitting every cutover deadline ahead of schedule.
- Prevented \$40K+ in post-deployment remediation costs by identifying and resolving **critical API and system-integration conflicts** within the program's technical risk matrix before go-live.
- Maintained an uninterrupted infrastructure deployment pipeline through high-volume system cutovers by partnering directly with engineers on sprint planning and release governance and **dashboard-driven progress tracking** for stakeholders.
- Held every external technical vendor to contracted **SLA delivery timelines by owning vendor delivery lifecycles and milestone tracking** across the integration program.
- Recovered a critical 3-week program delay with zero increase to baseline budget by restructuring resource allocation matrices and re-sequencing **infrastructure verification sprints**.

MITRE (Sponsored Capstone)

Nov 2022 – Mar 2023

Program Manager — Infrastructure

Virginia, United States

- Delivered a custom **AWS-based infrastructure and data systems pipeline into production** ahead of schedule by directing full-lifecycle execution across a 4-person engineering team for sponsor MITRE.
- Sustained engineering velocity under strict program timeline constraints by **governing scope boundaries and reporting milestones through delivery dashboards**, hitting 100% of committed milestones.

Avalara

Jun 2022 – Oct 2022

Technical Program Analyst — Infrastructure & Systems Integration (Agile Scrum)

Seattle, United States

- Eliminated disruption to **feature deployment** targets by directing infrastructure and systems integration delivery tracks and task distribution within an active Scrum environment.
- Resolved recurring infrastructure and data pipeline processing bottlenecks on AWS-hosted systems by **re-engineering ETL and systems integration workflows** in direct collaboration with the data engineering team.

SKILLS

Program & Infrastructure Governance: SDLC, Critical Path Method (CPM), Scope Management, Change Control (CCB), RAID Logs, Risk Mitigation, SLAs, Vendor & Facility Delivery Coordination

Methodologies: Agile, Scrum, Kanban, Waterfall, Sprint Planning, Backlog Grooming, Velocity Tracking, UAT

Infrastructure & Systems Integration: AWS Cloud Infrastructure, Enterprise Systems Integration, Infrastructure Delivery, Data Pipelines / ETL, API Integration, Systems Architecture, SQL

Tools & Platforms: AWS, Jira, Confluence, MS Project, ServiceNow, Slack, Miro, Smartsheet, Tableau / Power BI, AI Application Building

EDUCATION

George Mason University, College of Engineering and Computing

Master of Science, Data Analytics Engineering – GPA: 3.75

CERTIFICATIONS

- Project Management Professional (PMP) – Project Management Institute (PMI) | Issued: Jun 4, 2026, | Active until: Jun 4, 2029
- Certified ScrumMaster (CSM) – Scrum Alliance | Issued: May 2026 | Active until: May 2028
